

Figure 2. Compensable fatalities involving forklifts and other industrial power carrier vehicles by acceptance year, Oregon, 1997-2006

Compensable fatalities are claims, accepted by insurers, arising from a fatal occupational injury or disease that entitles workers and/or their survivors to compensation. Data exclude deaths of workers not subject to Oregon Workers' Compensation coverage, such as workers who were self-employed or worked in Oregon for out-of-state employers, city of Portland police and fire employees, or federal employees.

The current table includes accepted disabling claims in which either the primary or secondary source of the injury was either a forklift (source codes 8510-8519) or another powered industrial carrier (source codes 8520-8529).

Source of injury is classified according to the Occupational Injury and Illness Classification System (OIICS).

Source data are continually updated to be as accurate as possible, so report results may vary over time.
