Footnotes:

Compensable fatalities are claims, accepted by insurers, arising from a fatal occupational injury or disease that entitles workers and/or their survivors to compensation. Data exclude deaths of workers not subject to Oregon Workers' Compensation coverage, such as workers who were self-employed or worked in Oregon for out-of-state employers, city of Portland police and fire employees, or federal employees. For additional information about employer coverage requirements, you may contact the Employer Compliance Program at [wcd.employerinfo@state.or.us](mailto:wcd.employerinfo@state.or.us) or call (888) 877-5670.

(continued next page)

+ Indicates the fatality was program-related

Program-related fatalities are a subset of compensable fatalities that resulted from incidents the DCBS Occupational Safety and Health Division (Oregon OSHA) determined may have been prevented by complying with safety and health standards and/or implementing a safety and health management program. Please contact Oregon OSHA at (503) 378-3272 for information about Oregon OSHA fatality investigations.

Industries are grouped and classified according to the [North American Industry Classification System](#) (NAICS), 2002 edition.

Industry classification codes are also provided according to the [Standard Industrial Classification Manual](#) (SIC), 1987 Edition.

During 2004, the Oregon Workers' Compensation Division began converting claims data from the Standard Industrial Classification (SIC) system to the new North American Industry Classification System (NAICS). This conversion will allow the United States to make data comparisons with Canada and Mexico. Tables for 2004 and 2005 are available for fatalities by SIC and NAICS codes. Previous years' tables were presented using SIC codes only.

Employees of client leasing firms are reported by the industry in which they were working at the time of injury.

Injury events are classified according to the Bureau of Labor Statistics' [Occupational Injury and Illness Classification System](#) (OIICS).

Injury age is the age of the employee at the time of the fatal injury or the diagnosis of the fatal illness which may be different than the age at death.

Tenure is the length of time, in months, that an employee had been working for the employer at the time of the fatal injury or the diagnosis of the fatal illness.

\* Indicates the tenure is unknown

Three fatalities occurred outside of Oregon: one in Nevada, one in California, and one in Italy.
