Table 1. Average temporary disability days and claim costs paid for resolved accepted disabling claims by resolution year, Oregon, 1996-2009

Footnotes:

Accepted disabling claims are claims, accepted by insurers, arising from occupational injuries or diseases that entitle workers to compensation for disability or death. Fatality and permanent total disability (PTD) claims and their associated costs are excluded from this analysis.

Claims are reported by the year of claim resolution, which is the year of the latest notice of claim closure, determination order, or claim disposition agreement. This may be different than the year of injury or year of claim acceptance.

PPD = Permanent partial disability; CDA = Claim disposition agreement; DCS = Disputed claim settlement.

Claim cost is the composite of medical and indemnity costs. The components of indemnity are temporary disability, PPD, CDA, DCS, and vocational assistance. Reported cost statistics are means, unless otherwise specified. Costs have been rounded, and components may not sum to composite averages. In addition, due to the estimation process, conclusions should not be drawn for rows with a small number of claims.

Average costs for the indemnity components are computed over the total claims resolved. The temporary disability days and dollars include estimates of temporary disability for claims with claim disposition agreements prior to claim closure. Insurers do not report this data to the department. Indemnity costs incurred after claim closure that were paid through mid-May 2010 are also included in this table. This primarily includes permanent partial disability modified by dispute resolution, disputed claim settlements, and vocational assistance costs. These costs after resolution generally increase over time. Worker, employer, and insurer reimbursements from the Workers' Benefit Fund are also excluded.

Medical costs are reported at the time of claim resolution for approximately 88 percent of claims. The average medical costs of claims without data (mostly CDAs) are assumed to be the same as those with reported data. Medical costs after claim resolution, which are often substantial, are not included in this report.

Data in this table will change. The claim counts will change as claims are reopened and resolved. Also, as mentioned above, post-closure costs will increase over time. However, if past trends continue, then the temporary disability days and costs for the most recent year will decline as claims are reopened and then closed in future years.

Footnotes on following page

Average temporary disability days and claim costs paid for resolved accepted disabling claims by resolution year and insurer type, Oregon, 1996-2009

Footnotes:

Accepted disabling claims are claims, accepted by insurers, arising from occupational injuries or diseases that entitle workers to compensation for disability or death. Fatality and permanent total disability (PTD) claims and their associated costs are excluded from this analysis.

Claims are reported by the year of claim resolution, which is the year of the latest notice of claim closure, determination order, or claim disposition agreement. This may be different than the year of injury or year of claim acceptance.

PPD = Permanent partial disability; CDA = Claim disposition agreement; DCS = Disputed claim settlement.

Claim cost is the composite of medical and indemnity costs. The components of indemnity are temporary disability, PPD, CDA, DCS, and vocational assistance. Reported cost statistics are means, unless otherwise specified. Costs have been rounded, and components may not sum to composite averages. In addition, due to the estimation process, conclusions should not be drawn for rows with a small number of claims.

Average costs for the indemnity components are computed over the total claims resolved. The temporary disability days and dollars include estimates of temporary disability for claims with claim disposition agreements prior to claim closure. Insurers do not report this data to the department. Indemnity costs incurred after claim closure that were paid through mid-May 2010 are also included in this table. This primarily includes permanent partial disability modified by dispute resolution, disputed claim settlements, and vocational assistance costs. These costs after resolution generally increase over time. Worker, employer, and insurer reimbursements from the Workers' Benefit Fund are also excluded.

Medical costs are reported at the time of claim resolution for approximately 88 percent of claims. The average medical costs of claims without data (mostly CDAs) are assumed to be the same as those with reported data. Medical costs after claim resolution, which are often substantial, are not included in this report.

Data in this table will change. The claim counts will change as claims are reopened and resolved. Also, as mentioned above, post-closure costs will increase over time. However, if past trends continue then the temporary disability days and costs for the most recent year will decline as claims are reopened and then closed in future years.

Table 3. Average temporary disability days and claim costs paid for resolved accepted disabling claims by accident event or exposure, Oregon, 2009

Footnotes:

Accepted disabling claims are claims, accepted by insurers, arising from occupational injuries or diseases that entitle workers to compensation for disability or death. Fatality and permanent total disability (PTD) claims and their associated costs are excluded from this analysis.

Claims are reported by the year of claim resolution, which is the year of the latest notice of claim closure, determination order, or claim disposition agreement. This may be different than the year of injury or year of claim acceptance.

Event of injury is classified according to the Bureau of Labor Statistics' Occupational Injury and Illness Classification System (OIICS).

PPD = Permanent partial disability; CDA = Claim disposition agreement; DCS = Disputed claim settlement.

Claim cost is the composite of medical and indemnity costs. The components of indemnity are temporary disability, PPD, CDA, DCS, and vocational assistance. Reported cost statistics are means, unless otherwise specified. Costs have been rounded, and components may not sum to composite averages. In addition, due to the estimation process, conclusions should not be drawn for rows with a small number of claims.

Average costs for the indemnity components are computed over the total claims resolved. The temporary disability days and dollars include estimates of temporary disability for claims with claim disposition agreements prior to claim closure. Insurers do not report this data to the department. Indemnity costs incurred after claim closure that were paid through mid-May 2010 are also included in this table. This primarily includes permanent partial disability modified by dispute resolution, disputed claim settlements, and vocational assistance costs. These costs after resolution generally increase over time. Worker, employer, and insurer reimbursements from the Workers' Benefit Fund are also excluded.

Medical costs are reported at the time of claim resolution for approximately 88 percent of claims. The average medical costs of claims without data (mostly CDAs) are assumed to be the same as those with reported data. Medical costs after claim resolution, which are often substantial, are not included in this report.

Data in this table will change. The claim counts will change as claims are reopened and resolved. Also, as mentioned above, post-closure costs will increase over time. However, if past trends continue, then the temporary disability days and costs for the most recent year will decline as claims are reopened and then closed in future years.

Footnotes on following page

Table 4. Average temporary disability days and claim costs paid for resolved accepted disabling claims by nature of injury or disease, Oregon, 2009

Footnotes:

Accepted disabling claims are claims, accepted by insurers, arising from occupational injuries or diseases that entitle workers to compensation for disability or death. Fatality and permanent total disability (PTD) claims and their associated costs are excluded from this analysis.

Claims are reported by the year of claim resolution, which is the year of the latest notice of claim closure, determination order, or claim disposition agreement. This may be different than the year of injury or year of claim acceptance.

Nature of injury is classified according to the Bureau of Labor Statistics' Occupational Injury and Illness Classification System (OIICS).

PPD = Permanent partial disability; CDA = Claim disposition agreement; DCS = Disputed claim settlement.

Claim cost is the composite of medical and indemnity costs. The components of indemnity are temporary disability, PPD, CDA, DCS, and vocational assistance. Reported cost statistics are means, unless otherwise specified. Costs have been rounded, and components may not sum to composite averages. In addition, due to the estimation process, conclusions should not be drawn for rows with a small number of claims.

Average costs for the indemnity components are computed over the total claims resolved. The temporary disability days and dollars include estimates of temporary disability for claims with claim disposition agreements prior to claim closure. Insurers do not report this data to the department. Indemnity costs incurred after claim closure that were paid through mid-May 2010 are also included in this table. This primarily includes permanent partial disability modified by dispute resolution, disputed claim settlements, and vocational assistance costs. These costs after resolution generally increase over time. Worker, employer, and insurer reimbursements from the Workers' Benefit Fund are also excluded.

Medical costs are reported at the time of claim resolution for approximately 88 percent of claims. The average medical costs of claims without data (mostly CDAs) are assumed to be the same as those with reported data. Medical costs after claim resolution, which are often substantial, are not included in this report.

Data in this table will change. The claim counts will change as claims are reopened and resolved. Also, as mentioned above, post-closure costs will increase over time. However, if past trends continue, then the temporary disability days and costs for the most recent year will decline as claims are reopened and then closed in future years.

Footnotes on following page

Table 5. Average temporary disability days and claim costs paid for resolved accepted disabling claims by body part affected, Oregon, 2009

Footnotes:

Accepted disabling claims are claims, accepted by insurers, arising from occupational injuries or diseases that entitle workers to compensation for disability or death. Fatality and permanent total disability (PTD) claims and their associated costs are excluded from this analysis.

Claims are reported by the year of claim resolution, which is the year of the latest notice of claim closure, determination order, or claim disposition agreement. This may be different than the year of injury or year of claim acceptance.

Body part is classified according to the Bureau of Labor Statistics' Occupational Injury and Illness Classification System (OIICS).

PPD = Permanent partial disability; CDA = Claim disposition agreement; DCS = Disputed claim settlement.

Claim cost is the composite of medical and indemnity costs. The components of indemnity are temporary disability, PPD, CDA, DCS, and vocational assistance. Reported cost statistics are means, unless otherwise specified. Costs have been rounded, and components may not sum to composite averages. In addition, due to the estimation process, conclusions should not be drawn for rows with a small number of claims.

Average costs for the indemnity components are computed over the total claims resolved. The temporary disability days and dollars include estimates of temporary disability for claims with claim disposition agreements prior to claim closure. Insurers do not report this data to the department. Indemnity costs incurred after claim closure that were paid through mid-May 2010 are also included in this table. This primarily includes permanent partial disability modified by dispute resolution, disputed claim settlements, and vocational assistance costs. These costs after resolution generally increase over time. Worker, employer, and insurer reimbursements from the Workers' Benefit Fund are also excluded.

Medical costs are reported at the time of claim resolution for approximately 88 percent of claims. The average medical costs of claims without data (mostly CDAs) are assumed to be the same as those with reported data. Medical costs after claim resolution, which are often substantial, are not included in this report.

Data in this table will change. The claim counts will change as claims are reopened and resolved. Also, as mentioned above, post-closure costs will increase over time. However, if past trends continue, then the temporary disability days and costs for the most recent year will decline as claims are reopened and then closed in future years.

Table 6a. Average temporary disability days and claim costs paid for resolved accepted disabling claims by industry (NAICS), Oregon, 2009

Footnotes:

Accepted disabling claims are claims, accepted by insurers, arising from occupational injuries or diseases that entitle workers to compensation for disability or death. Fatality and permanent total disability (PTD) claims and their associated costs are excluded from this analysis.

Claims are reported by the year of claim resolution, which is the year of the latest notice of claim closure, determination order, or claim disposition agreement. This may be different than the year of injury or year of claim acceptance.

Industry is classified according to the North American Industrial Classification System (NAICS), 2002 edition. Employees of client leasing companies are reported by the industry in which they were working at the time of injury.

PPD = Permanent partial disability; CDA = Claim disposition agreement; DCS = Disputed claim settlement.

Claim cost is the composite of medical and indemnity costs. The components of indemnity are temporary disability, PPD, CDA, DCS, and vocational assistance. Reported cost statistics are means, unless otherwise specified. Costs have been rounded, and components may not sum to composite averages. In addition, due to the estimation process, conclusions should not be drawn for rows with a small number of claims.

Average costs for the indemnity components are computed over the total claims resolved. The temporary disability days and dollars include estimates of temporary disability for claims with claim disposition agreements prior to claim closure. Insurers do not report this data to the department. Indemnity costs incurred after claim closure that were paid through mid-May 2010 are also included in this table. This primarily includes permanent partial disability modified by dispute resolution, disputed claim settlements, and vocational assistance costs. These costs after resolution generally increase over time. Worker, employer, and insurer reimbursements from the Workers' Benefit Fund are also excluded.

Medical costs are reported at the time of claim resolution for approximately 88 percent of claims. The average medical costs of claims without data (mostly CDAs) are assumed to be the same as those with reported data. Medical costs after claim resolution, which are often substantial, are not included in this report.

Data in this table will change. The claim counts will change as claims are reopened and resolved. Also, as mentioned above, post-closure costs will increase over time. However, if past trends continue, then the temporary disability days and costs for the most recent year will decline as claims are reopened and then closed in future years.

Footnotes on following page

Table 6b. Average temporary disability days and claim costs paid for resolved accepted disabling claims by industry (NAICS), Oregon, 2009

Footnotes:

Accepted disabling claims are claims, accepted by insurers, arising from occupational injuries or diseases that entitle workers to compensation for disability or death. Fatality and permanent total disability (PTD) claims and their associated costs are excluded from this analysis.

Claims are reported by the year of claim resolution, which is the year of the latest notice of claim closure, determination order, or claim disposition agreement. This may be different than the year of injury or year of claim acceptance.

Industry is classified according to the North American Industrial Classification System (NAICS), 2002 edition. Employees of client leasing companies are reported by the industry in which they were working at the time of injury.

PPD = Permanent partial disability; CDA = Claim disposition agreement; DCS = Disputed claim settlement.

Claim cost is the composite of medical and indemnity costs. The components of indemnity are temporary disability, PPD, CDA, DCS, and vocational assistance. Reported cost statistics are means, unless otherwise specified. Costs have been rounded, and components may not sum to composite averages. In addition, due to the estimation process, conclusions should not be drawn for rows with a small number of claims.

Average costs for the indemnity components are computed over the total claims resolved. The temporary disability days and dollars include estimates of temporary disability for claims with claim disposition agreements prior to claim closure. Insurers do not report this data to the department. Indemnity costs incurred after claim closure that were paid through mid-May 2010 are also included in this table. This primarily includes permanent partial disability modified by dispute resolution, disputed claim settlements, and vocational assistance costs. These costs after resolution generally increase over time. Worker, employer, and insurer reimbursements from the Workers' Benefit Fund are also excluded.

Medical costs are reported at the time of claim resolution for approximately 88 percent of claims. The average medical costs of claims without data (mostly CDAs) are assumed to be the same as those with reported data. Medical costs after claim resolution, which are often substantial, are not included in this report.

Data in this table will change. The claim counts will change as claims are reopened and resolved. Also, as mentioned above, post-closure costs will increase over time. However, if past trends continue, then the temporary disability days and costs for the most recent year will decline as claims are reopened and then closed in future years.
